To Whom It May Concern:

JMP Engineering Inc. considers Arthur Electric a valued supplier. Our organizations have been working together since 2004 on various projects such as

- Upgrades to chemical mixing plants for complete controls replacements in intrinsically safe environments
- Flexible manufacturing control systems, including gantry robots, safety PLC's, vision inspection systems and distributed I/O systems
- Many industrial control system installations including panel wiring, assembly, installation, commissioning and inspections

I feel that JMP Engineering has benefited from our relationship with Arthur Electric. Their understanding of our services and customers has lead to a quick understanding of project requirements, meeting our performance targets, deadlines and budgets. They are competitive, professional, timely and work with our best interests in mind. They are also flexible and accommodating to our needs from project conception through to production start-up.

I highly recommend Arthur Electric as a supplier.

Sincerely,

Laurens VanPagee
Regional Manager, PEng
